VMI - VENDOR MANAGED INVENTORY - SOLUTIONS.

We offer VMI solutions that enable inventory management from the supplier side.

Vendor Managed Inventory (VMI) es un modelo de negocio que, basado en las nuevas tecnologías IoT, permite al fabricante de un producto tener una visión inmediata del stock de sus clientes. De esta forma se pueden desarrollar servicios de reposición automática de stock, previsión de demanda, acopio de materias primas en base a previsiones de demanda, optimización de rutas de entrega, etc.

Vendor Managed Inventory (VMI) is a business model that, based on new IoT technologies, allows the manufacturer of a product to have an immediate view of its customers' stock. In this way, automatic stock replenishment services can be developed, demand forecasting, stockpiling of raw materials based on demand forecasts, optimisation of delivery routes, etc. IDDI designs these new services and solutions adapting them to the needs of your company, and developing new connected services adapted to the new expectations of the market.

CONNECTED SERVICES DESIGN

We design connected services to meet new market needs.

Apoyamos a las empresas en el diseño de nuevos servicios conectados, transformando sus productos en servicios orientados a satisfacer las nuevas necesidades del mercado. Ayudamos a las empresas a descubrir nuevos nichos de negocio.

We support companies in the design of new connected services, transforming their products into services aimed at meeting new market needs. We help companies to discover new business niches.

AGRICULTURE AND LIVESTOCK 4.0

We develop hybrid businesses related to Agriculture and Livestock 4.0, connecting new technologies to the demands of new markets.

En IDDI apoyamos a las empresas del sector Agroalimentario desarrollando nuevos negocios basados en productos y servicios gracias a las tecnologías IoT y la inteligencia artificial. Al conectarnos con el mercado, diseñamos los productos y servicios del mañana.

At IDDI we support companies in the Agrifood sector by developing new businesses based on products and services thanks to IoT technologies and artificial intelligence. By connecting with the market, we design the products and services of tomorrow. And you, do you want to connect?
